Article 6.2 Ambition Dialogue

Session 3 – Financing and market signals to achieve ambition

Belém, Brazil

IETA

ARTICLE 6 AS A FINANCE & AMBITION MULTIPLIER

- Article 6.2 lowers mitigation costs by enabling cooperation across different marginal abatement costs; both buyers and sellers gain when corresponding adjustments are robust.
- Early and plurilateral cooperation amplifies benefits and accelerates results.
- As countries' climate targets become more stringent, moving towards net-zero, and the cost of mitigation increases, Article 6 capital shifts to developing regions, achieving more mitigation per dollar and delivering co-benefits, supporting the generation of additional environmental, economic, and social benefits.
- International cooperation under Article 6 can more than double the amount of emission reductions achieved by 2030
- Countries that employ the A6 mechanism always benefit, regardless of how many countries participate

\$250 billion a year in savings by 2030 when implementing NDC using Article 6 vs. independent implementation.

Reduction of 5Gt CO₂eq. per year by 2030 if savings are invested in additional mitigation activities.

Up to \$1 trillion a year by 2050 in international financial flows towards emission reduction and removal activities.

UNLOCK PRIVATE INVESTMENT

- NDC 3.0: ~ 90% of countries want to use Article 6. In the previous NDC round, it was ~ 60%.

Foundational

Minimum signals for engagement

- Clear targets
- Identify sectors and activities
- Quantify and earmark a carbon budget for Article 6

Enabling

Building confidence for cooperation

- Institutional and legal frameworks
- Robust tracking systems
- Define partners and eligibility rules
- Engage early in pilot projects and sandboxes

Operational

Unlocking investment and scaling action

- Benefits sharing strategies
- Clear processes for authorisation and reporting
- Embed in long-term decarbonisation strategies

Clear and early signals from countries to Article 6.2:

- LOAs
- Accounting and transparency
- Corresponding Adjustments
