Carbfix: Input to “Structured public consultation: Further input – Removal activities under the Article 6.4. mechanism”

Carbfix appreciates the opportunity to submit the following comments on questions 8., 9. and 11. raised on monitoring and reporting:

8. Carbfix supports either option (b) or (c), with the provision that monitoring requirements may be stopped if *“all available evidence indicates that the stored CO2 will be completely and permanently contained;”* as is stated in Article 18 in the EU Directive on the geological storage of carbon dioxide.
9. Carbfix supports a requirement for simplified annual reporting unless it can be demonstrated that the stored CO2 will be completely and permanently contained.
11. Carbfix supports an activity level risk assessment based on both the durability of the removals and the risk of reversal associated with the particular activity.

Sincerely,

Edda Aradóttir, CEO of Carbfix
